UNVEILING THE AVENSIA SYSTEMS

VERSATILE IP PHONES

AVENSIA Tech Solutions has made a name for itself in IP phone business as well. Our IP Phones & IP phone systems are highly sophisticated and designed to suit the needs of the respective users. The best part is that we have loads of options for the user to choose from, and this is the secret behind our business success so far.

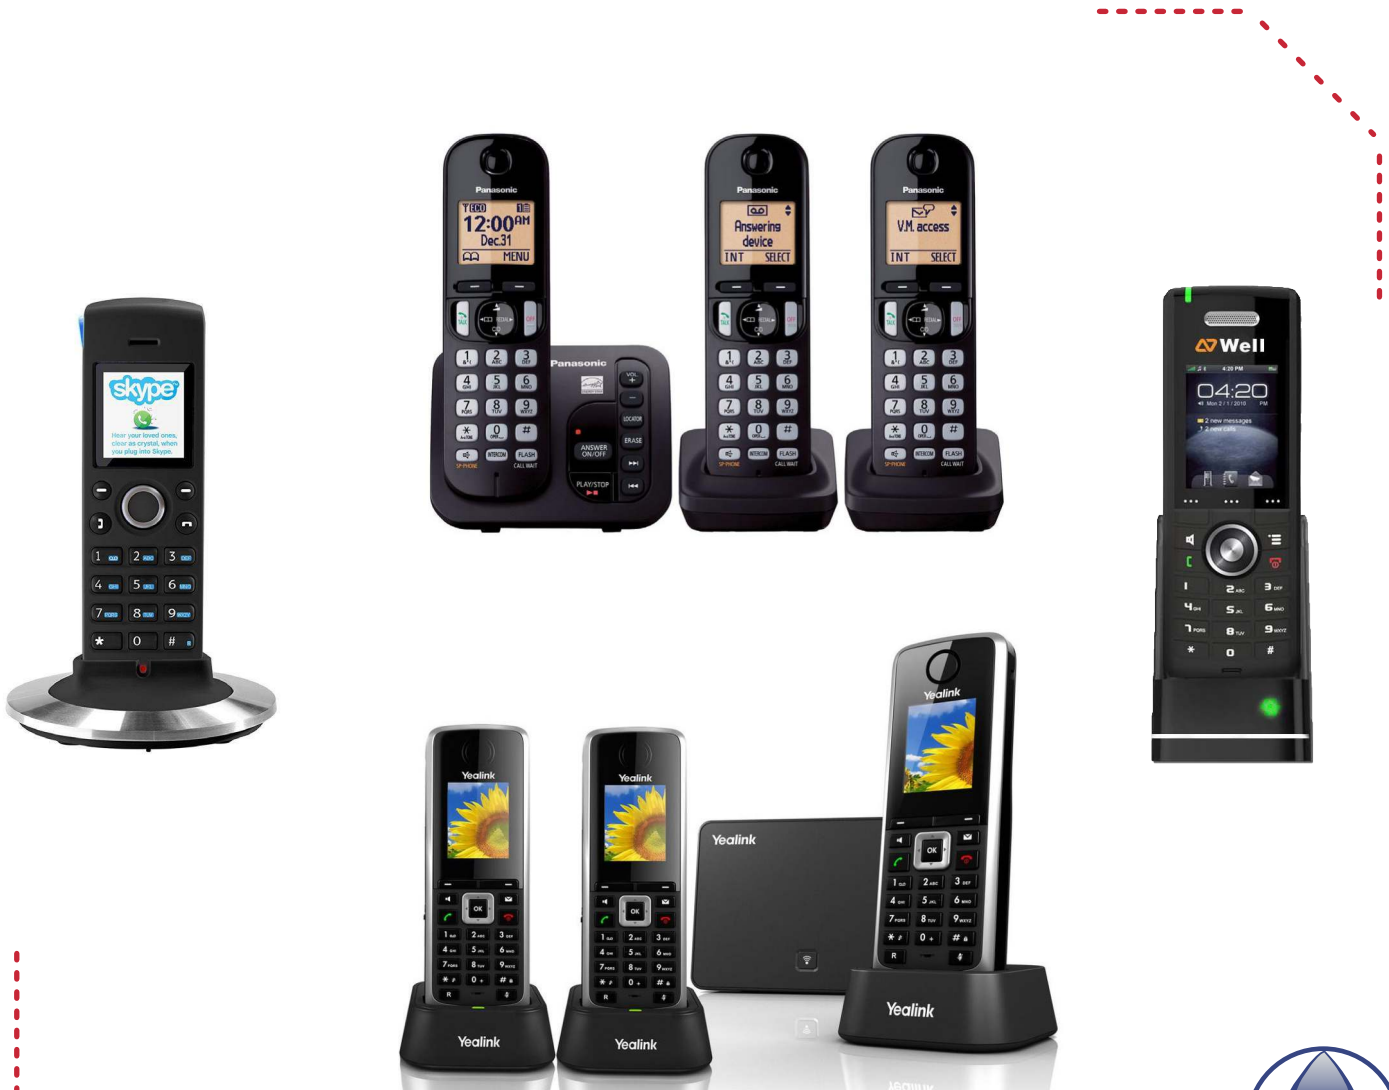

AVENSIA

WIRELESS DECT PHONES

WIFI / IP HANDSETS

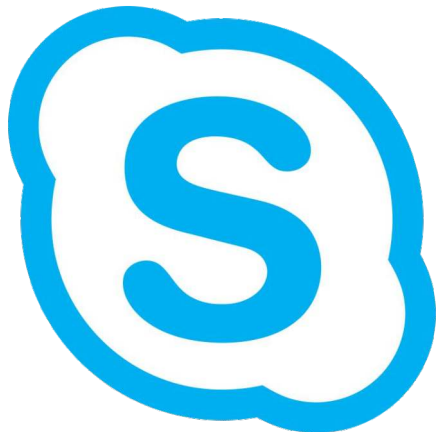

A WiFi or DECT phone network consists of a fixed wireless base station attached to the PBX system and number of wireless handsets communicating under the dect base station. The dect phones can be operated any where under the dect base station coverage area. The range of the system can be extended by using one or more 'repeaters' or 'signal boosters' by placing it in between the base station and dect phone. The IP handsets are smaller, lighter and include more features than analogue models. A dect phone is same like a mobile. Instead of using GSM network we create our own wireless network with the help of Dect base station and repeaters. The Public telephone line is accessible in the dect phones by configuring the backend pbx system. All the deskphone features like conference Calls, extension calls, call transfer and call waiting is available in Dect Phones.

AVENSIA SYSTEMS CONFERENCING SYSTEM: Teleconference Communication Technologies

AVENSIA offers Video conferencing system Dubai (VC) could be the conduct of your business video conferencing (also referred to as a video conference or video teleconference) with a list of communication technologies which permit several locations to speak by simultaneous two-way audio and video transmissions. They have been called 'visual collaboration' and is also a kind of groupware.

Video Conferencing Dubai is different from videophone calls for the reason that it's meant to serve a conference or multiple locations instead of individuals It's an intermediate type of video telephony.

Videoconferencing uses video and audio telecommunications to create people at different sites together. This could be as easy as a discussion between individuals private offices (point-to-point) or involve several (multi point) sites in large rooms at multiple office locations. Aside from the audio and visual transmission of meeting activities, videoconferencing technologies enables you to share documents and display info on whiteboards.

AVENSIA Systems for CCTV SOLUTIONS

The prime objective of AVENSIA Systems is to bring about simplicity in the CCTV solutions. You can get the best CCTV solutions for your business when you choose to work with AVENSIA Systems. However, the solutions are completely dependent upon the application. There are some vendors out there who believe in providing the same solution to all the clients without understanding the basic needs of the customer, but the case is completely different with AVENSIA Systems.
